

Multiple Intelligences

Multiple Intelligences

Howard Gardner in
Frames of minds (1983)
put forth a Multiple
Intelligences theory that
suggests that an array of
different kinds of
intelligences exist in
human beings.

Three Fundamental Propositions

1. Intelligence is not unitary.
2. Intelligence is not fixed.
3. Intelligence is not fully measured by IQ tests.

What is an intelligence?

"...ability to solve problems or
fashion products that are of
consequence in a particular
cultural setting or community.

(Gardner, 1983)

The Eight Functions of Intelligences

- Survival
- Skills
- Perceptiveness
- Problem Solving
- Communication
- Creativity
- Knowledge
- wisdom

The Eight Intelligences

- Verbal/Linguistic
- Logical/Mathematical
- Visual/Spatial
- Musical/Rhythmic
- Word Smart
- Logical/Math Smart
- Art/Space Smart
- Music Smart

- Bodily/Kinesthetic

- Naturalist

- Interpersonal

- Intrapersonal

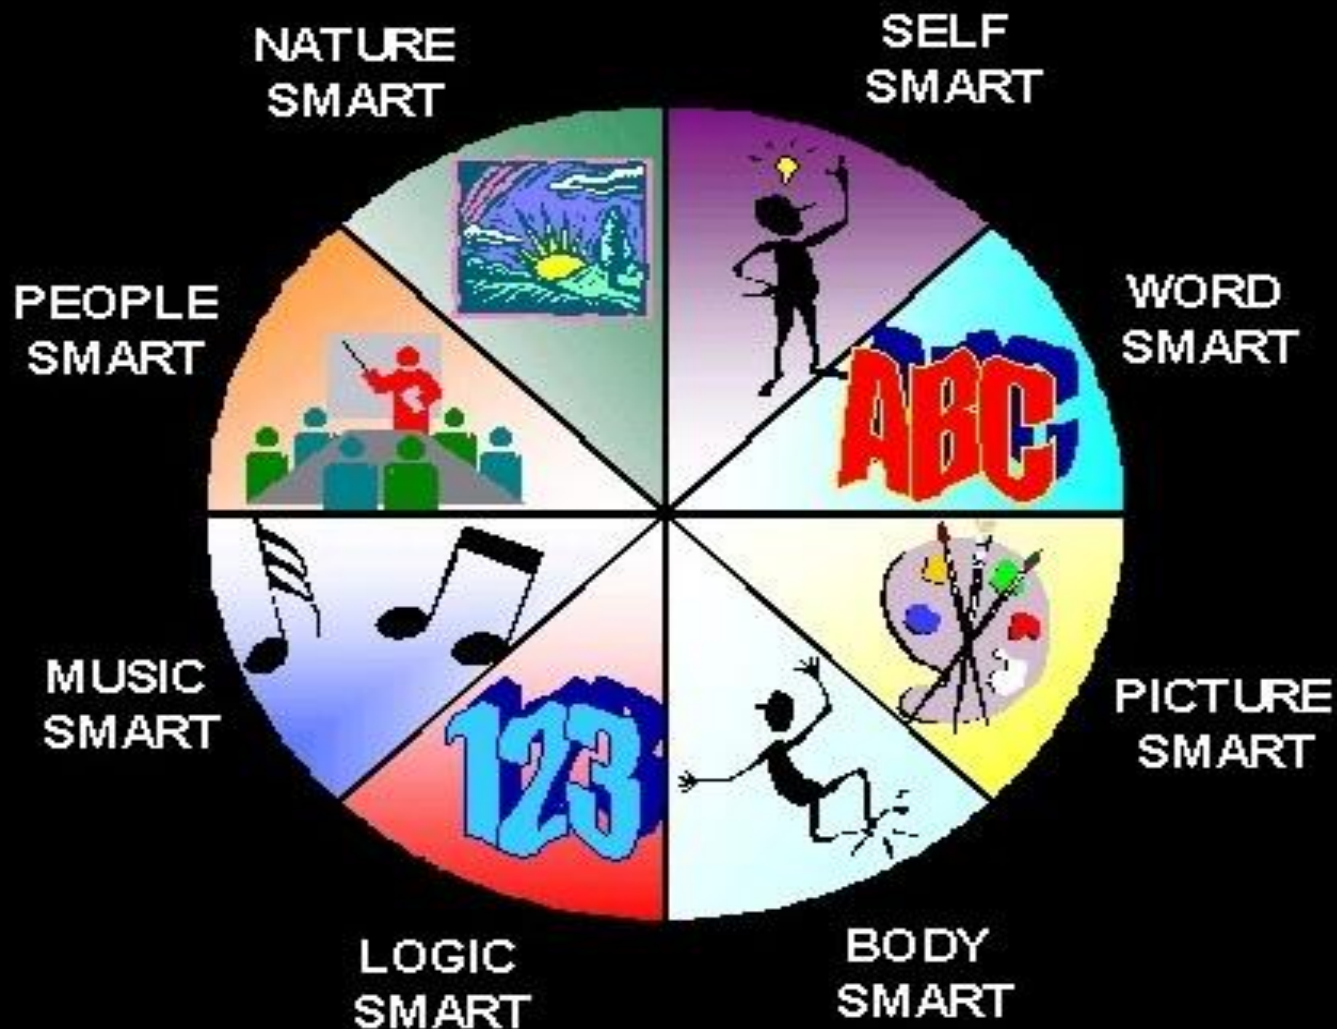

- Body Smart

- Nature Smart

- People Smart

- Self Smart

The Eight Intelligences

Verbal/Linguistic Intelligence

The ability to use words and language.

- highly developed auditory skills.
- elegant speakers.
- think in words rather than pictures.

William Shakespeare
(1564 – 1611)

Verbal/Linguistic Intelligence

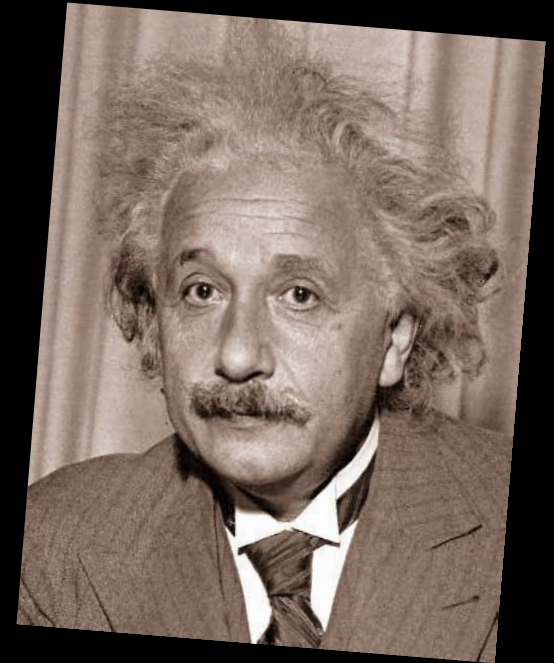

Skills:

Listening, speaking, writing, story telling, explaining, teaching, using humor, understanding the syntax and meaning of words, remembering information, convincing someone of their point of view, analyzing language usage.

Logical/Mathematical Intelligence

The ability to use reason, logic and numbers.

- think conceptually in logical and numerical patterns.
- make connections between pieces of information.

Albert Einstein
(1879-1955)

- always curious about the world around them.
- ask lots of questions.
- Like to do experiments.

Logical/Mathematical

Intelligence *skills:*

Problem solving, classifying and categorizing information, working with abstract concepts to figure out the relationship of each to the other, handling long chains of reason to make local progressions, doing controlled experiments, questioning and wondering about natural events, performing complex mathematical calculations, working with geometric shapes

Visual/Spatial Intelligence

The ability to perceive the visual.

- tend to think in pictures.
- need to create vivid mental images to retain information.
- enjoy looking at maps, charts, pictures, videos, and movies.

Michelangelo
(1475-1564)

Visual/Spatial Intelligence

Skills:

Puzzle building, reading, writing, understanding charts and graphs, a good sense of direction, sketching, painting, creating visual metaphors and analogies (perhaps through the visual arts), manipulating images, constructing, fixing, designing practical objects, interpreting visual images.

Musical/Rhythmic Intelligence

The ability to produce and appreciate music.

- think in sounds, rhythms and patterns.
- immediately respond to music either appreciating or criticizing what they hear.
- extremely sensitive to environmental sounds (e.g. crickets, bells, dripping taps.)

Ustad Nusrat Fateh Ali
Khan

(1948-1997)

Musical/Rhythmic Intelligence

Skills:

Singing, whistling, playing musical instruments, recognizing tonal patterns, composing music, remembering melodies, understanding the structure and rhythm of music.

Bodily/Kinesthetic Intelligence

The ability to control body movements and handle objects skillfully.

- express themselves through movement.
- have a good sense of balance and eye-hand co-ordination.

Sir Edmund Hillary

- able to remember and process information through interacting with the space around them.

Bodily/Kinesthetic Intelligence

Skills:

Dancing, physical co-ordination, sports, hands on experimentation, using body language, crafts, acting, miming, using their hands to create or build, expressing emotions through the body.

Naturalist Intelligence

The ability to understand
environmental
interdependence and
appreciate plants, flowers,
trees and animals.

Steve Irwin

(1962-2006)

- attracted to any type of natural stimuli, including plants, animals, clouds, minerals, rocks, land formations, or chemicals.

Naturalist Intelligence

Skills:

Analyzing similarities and differences, caring for plants, gardens, pets, wild animals, collecting plants, insects, rocks, discovering patterns in nature, predicting the weather, protecting the environment, recognizing species, rocks, stars and clouds, taming and training animals.

Interpersonal Intelligence

The ability to relate and understand others.

- try to see things from other people's point of view in order to understand how they think and feel.
- often have an uncanny ability to sense feelings, intentions and motivations.

**Martin Luther
King Jr.**
(1929-1968)

- are great organizers and try to maintain peace in group settings and encourage co-operation.
- use both verbal (e.g. speaking) and non-verbal language (e.g. eye contact, body language) to communicate.

Interpersonal Intelligence

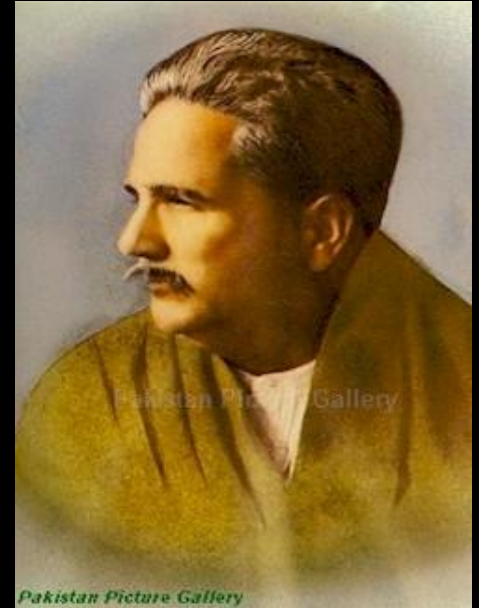

Skills:

Seeing things from other perspectives (dual-perspective), listening, using empathy, understanding other people's moods and feelings, counseling, co-operating with groups, noticing people's moods, motivations and intentions, communicating both verbally and non-verbally, building trust, peaceful conflict resolution, establishing positive relations with other people.

Intrapersonal Intelligence

The ability to self-reflect and be aware of one's inner state of being.

- try to understand their inner feelings, dreams, relationships with others, and strengths and weaknesses.

Allama Iqbal
(1877-1938)

Intrapersonal Intelligence

Skills:

Recognizing their own strengths and weaknesses, reflecting and analyzing themselves, awareness of their inner feelings, desires and dreams, evaluating their thinking patterns, reasoning with themselves, understanding their role in relationship to others.
